SUMMARY

Computer Engineering student at LDRP Institute of Technology and Research, with hands-on experience building C++ systems and CLI applications. Actively strengthening skills in Data Structures & Algorithms, backend development, and open-source contribution. Seeking a software development internship to apply and grow practical engineering skills.

EDUCATION

LDRP Institute of Technology and Research
Bachelor of Engineering in Computer Engineering
• **CGPA:** 8.47 / 10.0 | **Current Semester:** 5th

Aug. 2024 – May 2028
Gandhinagar, Gujarat

PROJECTS

CLI Bank Management System | C++, Binary File I/O, OOP | [GitHub](#)

- Built a dual-role CLI banking system with separate Admin and User dashboards supporting account creation, deposit, withdrawal, balance check, and name update operations.
- Implemented persistent storage using binary file I/O with direct struct serialization; used seekp for in-place record updates without rewriting the entire file.
- Used function overloading to handle role-based operations and enforced password authentication with 4-digit account number validation and duplicate detection on signup.

Train Reservation System | C++, Structs, Modular Design | [GitHub](#)

- Built a dual-role CLI reservation system with separate Admin and Guest interfaces supporting train management, seat booking, and real-time availability tracking.
- Admin module includes train addition and a reports section with filtering by type, departure, and destination station; Guest module handles seat booking with input validation against available capacity.
- Designed using structs and modular functions across 15+ dedicated routines, maintaining clean separation of responsibilities between roles.

Alice in Borderland Number Survival Game | C++, Game Logic, OOP | [GitHub](#)

- Built a multi-player CLI survival game where each round assigns random numbers to players; the target is 80% of the group average, and players furthest from it lose points and get eliminated at -10.
- Managed shared game state using static class members for total points, player count, and relative scores across rounds.
- Handled player elimination with in-place array shifting to reassign indices and maintain correct game state without dynamic memory allocation.

SKILLS

Languages: C, C++, Java (Basics), Python

Web: HTML, CSS, JavaScript, jQuery

Tools: Git, GitHub, VS Code

Concepts: Object-Oriented Programming, File Handling, Data Structures & Algorithms

CERTIFICATIONS

Python for Data Science

Consolidated Score: 75% | Online Assignments: 25/25 | Proctored Exam: 49.5/75

NPTEL – IIT Madras

Jan – Feb 2026

HACKATHONS & ACHIEVEMENTS

Impactthon

LDRP Institute of Technology and Research

Semifinalist

Dec. 2025 – Jan. 2026

- Reached the semifinal round out of all participating teams in a university-level hackathon.
- Designed a healthcare data platform with role-based access control, time-bound patient consent, and append-only medical records to ensure secure and transparent data flow.
